## Questions for South Napa Earthquake Field Team

Group:

1. Please broadly summarize what you saw today in the field. What conclusions can you draw from what you've seen?

No clear evidence of fault rupture identified along Redwood Road or Mt. Veeder Road north of Browns Valley Road. Identified shaking (?) related road cracks along Redwood Road and Mt. Veeder Road. Waypoints and geo referenced photos of all cracks.

Cracks in Redwood Road and vineyard road about 200 meters north of intersection of Redwood and Browns Valley were not identified on trend to NE in Alston Park.

2. What in this area should investigators study tomorrow? Are there obstacles that we need to overcome (i.e. access) to study this area or topic tomorrow?
3. What future research needs do you see from this area? What comprehensive studies would be helpful? What data would be useful for these studies?
4. Have you seen items in other areas or disciplines that need further study or investigation now or as a longer term topic?
